

Clinical and Translational Science Collaborative (CTSC) LOGIC MODEL—11/2014

Goals of CTSC: 1. Enhance translation from the laboratory to the clinic by shortening the time from scientific concepts to therapeutic realities. 2. Improve the health of our urban community, engage the community in research and translate improved health practices to the community. 3. Train, educate and provide career development for the next generation of clinical and translational science (CTS) researchers.

Context: NIH Support, Economic Conditions, Community Health Needs and Social Determinants of Health
